DETAILED ACTION

Request for Continued Examination

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/6/2010 has been entered.

Response to Arguments

Applicants have presented arguments over the 35 USC 112, first paragraph rejection for new matter. The arguments are found persuasive and the rejection is hereby withdrawn.

Applicants argue over the 35 USC 103 rejection over Davis et al. (US Patent 4,663,318) in view of Kivipelto (BMJ 2001 322: 1447-1451) and Simons et al. (Neurology 2001 57: 1089-1093). In general, Applicant's argue that the rejections are based on treatment of Alzheimer's, which the claim excludes. The arguments are found persuasive and the rejection is hereby withdrawn.

Please see the new grounds of rejection below.

Claim Rejections – 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-4, 38 and 41 are rejected under 35 U.S.C. 102(b) as being anticipated by Coe et al. (US PgPub 2001/0036949).

Coe et al. teach pharmaceutical compositions for the enhancement of cognition or the treatment of disorders involving cognitive dysfunction in a mammal comprising administration of a composition that comprises an acetylcholinesterase inhibitor such as galanthamine (paragraphs 0010 and 0142). Cognitive dysfunctions include mild cognitive impairment, age-related cognitive decline, vascular dementia, Parkinson's disease, dementia, Huntington's disease, stroke, traumatic brain injury, AIDS associated dementia and schizophrenia (paragraph 0146). Coe et al. teach therapeutic doses of galanthamine in paragraph 0338.

It is noted that the treatment of cognitive dysfunction will occur regardless of the etiology of the dysfunction. Therefore, the claim limitation of treating cognitive dysfunction of "a patient associated with low LDL-cholesterol values in serum" is not afforded patentable weight as the treatment of cognitive dysfunction will occur despite how the cognitive dysfunction began.

Conclusion

No claims are allowed.
